Are you ready for MADIC?

1. Your company recognizes that the efficient flow of information is as crucial to your success as any other management function.

2. As your business becomes more complex, you find yourself using "patchwork" programs or "workaround" solutions to get the information you need. Even so, you'd like more visibility, more control.

3. Your management would commit to changing corporate information systems if they were convinced that a new system would work better.

MADIC is ready for you.

1. MADIC's totally integrated data base management system supplies precisely the information your managers need. Data for any report can be drawn from any file in the system.

2. The product of 10 years of customer-directed development, MADIC probably already has all the capability your company will ever need. Using the Pick operating system, MADIC's 800 programs maintain over 2700 data fields, have 10,000 prompts, and can generate over 3,000 standard reports.

3. MADIC is used in manufacturing and distribution companies large or small, startup or established—discrete assembly, process, repetitive, or job shop operations.

When you're ready to upgrade your corporate information system...

Dial 1-800-The-Menu

"Hello, this is Menu."
"Hi, I'd like to find out how to get the software I need."
"We can run a search right now to see what's available on your subject, and a printed report can be sent to you the same day."
"How much will this cost?"
"From as little as $25. And if you decide to buy the software through Menu, the cost of the search is deducted from the cost of the software."
"It's that simple?"

It's that simple with Menu, The International Software Database.

The world's first and only comprehensive software reference center available on line, Menu puts information on more than 50,000 software packages at your fingertips.

Fully computerized, we continuously update them, ensuring you fast, accurate information. Plus, to help you decide what's best for you, we offer independent software reviews when available.

A toll-free call from your home or office taps into our great reservoir of software data. Tell us what you need. We'll tell you what's available, and what software is compatible with what hardware — making hardware shopping safer.

If you buy software through us, we'll help you three ways. First, we ensure that it is configured for your system. Second, we deduct the initial search charge from the cost of the software. Third, you can charge it on Visa or Mastercard.

Menu puts more than 50,000 software packages at your fingertips. Colorado residents call 482-5000.

What good are they doing, unused on a shelf?

Put those back issues to *work* for you with the *Computerworld* and *ISO WORLD* 1982 Indexes.

You'll get great material for reports, back-up material for purchase decisions, resource material for contracts, research results for long and short-range planning — in other words — a terrific reference library at your fingertips when you use one of our Indexes to access all the information that's stored in your back issues of *Computerworld, ISO WORLD,* and *Computer Business News.*

With the *Computerworld* Index, you get an easy reference (including page numbers and issue dates) to all the information that's packed into all 58 (including *Extra!* and *Computerworld OA)* 1982 issues — 2,636 pages of news, stories, In-Depths, Special Reports, interviews, applications stories, features and tutorials on everything from AFIPS to Zenith.

And in the *ISO WORLD* Index, you'll find entries from 3 issues of *ISO WORLD* and from 36 issues of *Computer Business News* — 913 pages of industry news and trends, features, new product announcements, marketing and distribution articles, perspectives, columns, and analyses, on everything from AB Dick to Zentec.

Take a look at just a few of the hundreds of entries listed in the *Computerworld* and *ISO WORLD* Indexes:

Index	Heading	# Entries
CW	Local Area Nets	70
CW	Microcomputers	81
CW	Graphics Systems	136
CW	Accounting Systems	101
CW	Disk Equipment	126
ISO	Dealers/Distributors	64
ISO	IBM-PC	84
ISO	Floppy Disks	51
ISO	Modems	45
ISO	Retail Stores	53

And that's a sample of just this year. We also have Indexes for *Computerworld* that go all the way back to 1976 and Indexes for CBN back to the first — (Nov. 1978-Dec. 1979)

If you don't have all the back issues of *Computerworld* and *ISO WORLD* that you need to get the articles you want, you can order back copies for the entire year on 35mm microfilm from University Microfilm, Int., Periodical Entry Dept., 300 North Zeeb Road, Ann Arbor, MI 48106 — at very reasonable rates. Or you can simply take advantage of their reprint service for individual articles.

Today's Human Resource Management Requires More than Paperwork and People Skills...

It demands the most proficient level of information technology available.

C
APPLICATIONS: PAYROLL/PERSONNEL
W/TEXT EDITING & OTHER

InSci's Payroll/Personnel System answers that need with superior technical features and unbeatable benefits for the user.

If you're thinking about implementing a payroll/ personnel software package, look no further than Information Science Incorporated. InSci's Human Resource Management System meets all your needs and then some. You need a system that satisfies end user's requirements, and one that provides superior technical features. A system that advances your human resource functions today and grows with you tomorrow.

Payroll/Personnel Systems for Database and Non-Database Environments

Our state-of-the-art payroll/personnel database system currently is integrated directly into three popular database management environments, including IMS/DL-1 and IDMS. It was designed to take full advantage of each specific database structure, eliminating clumsy, resource-draining interface programs that need to be coded and maintained. Our native programs are easy to install, tailor, maintain and support.

InSci also offers two non-database systems; one using a sequential file structure and the other using a VSAM access method.

Superior Technical Features Ensure the Most Proficient System Available

There are many outstanding features of the InSci system. Here are just a few:

- *Modularized design for easy maintenance*
  The system was designed from the top down, and is highly modularized, providing maximum flexibility. A single module or subroutine supports each specific function in the system, such as security or check printing. All processing is transaction driven.
- *User-exit routines*
  There are several strategic areas in the system defined to allow user-exit subroutines. These enable you to add your own program without changing the base system code. They can be used, for example, during Employee Record Maintenance or Payroll Calculation Processing, to override the standard system routine. They're coded as separately compiled and linked modules and are defined to the system via a special directory.
- *Source code*
  InSci, unlike many other software firms, gives *you* the source code, which allows you to go right into the system and alter it, if necessary.
- *Two operating modes—preliminary or final*
  Technical staff and the user can select the most efficient operating mode for each processing task. Urgent changes, such as payscale changes, can be processed in real time, final mode, so they become effective immediately. Preliminary processing mode allows for simulating situations, such as a payroll run, without affecting the database.

The User in Control

InSci's highly user-friendly system is based on easily alterable, accessible tables that the user defines, changes and maintains. Information need only be updated on a master table, and then each individual employee record is automatically updated. The user can change and access information and generate reports without the intervention of MIS.

Safety, Security Precautions

Controlled by the user, the "checkpoint restart" feature ensures that your data will always be safe, should disaster strike and your system goes down. Data can always be restored without timely reconstruction.

User-assigned passwords, company and transaction levels of security reduce the risk of an unauthorized disclosure of confidential data.

Maintenance Support and Training

InSci provides complete installation and implementation support. For the first year, you receive all updates and system enhancements at no charge. After that, we regularly send out enhancement tapes for new standard features, system corrections, and tax updates, at a minimal charge. Our quality assurance group runs rigorous tests to assure the most efficient operating system. A hotline service is available for immediate trouble-shooting. We offer ongoing technical and functional training.

Super Specialists

We've specialized in payroll/personnel systems ever since we started the industry back in 1965. All of our people—every one of them—are dedicated to developing and maintaining our systems based on current state-of-the-art. Moreover we specialize in systems for IBM and IBM-compatible mainframes alone. We have a commitment to the best systems, service and maintenance, and our super specialization makes it possible.

The word gets out. The word about an On-Line Human Resource System that's better. With very little effort on our part, data processing, personnel and financial executives have been hearing about us—and asking us to talk to them about ISI. And when we do, we win out over our competition 90% of the time. Clients recognize quality.

Clients like Ford Motor Company, Harvard University, The Washington Post, Hughes Aircraft Company, Bell Telephone of Canada, First Interstate Bancorp, Hartford Life Insurance and New York City Hospitals, to name just a few.

We know why we have the competitive edge. We have the industry's most advanced system architecture. We offer more on-line (real-time) payroll/personnel expertise than any other vendor. We deliver the best system documentation in the business. We're committed to customer service and we're ready and willing to be on-site to help clients with any aspect of their installation.

ISI software includes payroll processing and reporting, personnel management, position control, applicant tracking, career planning, affirmative action, and pension and benefits administration.

See COBOL.

Dick is a COBOL programmer. Dick is bored. Harried. Dick struggles with trace and debugging routines. Nonexistent documentation. Mainframe logjams. So Dick is four months behind schedule. And users are upset about turnaround times. They yell and make Dick upset. They make Dick's boss upset. Nobody is very happy.

See COBOL Run.

Jane is a happy COBOL programmer. She uses ANIMATOR.™ It's a Visual Programming™ aid for Micro Focus LEVEL II COBOL.™ It runs on a micro. It makes child's play of mainframe test and maintenance chores.

With ANIMATOR Jane sees a picture of the program explaining itself. In live action. In real time. In COBOL source code. ANIMATOR tracks the program's exact execution path. Including subroutine branches.

Jane can have the program run fast. Or slow. Or stop. With one key. This makes it easy to spot problems. Insert fixes. Set breakpoints. Instantly.

Jane's programs sometimes win awards. Yet she always meets schedules. Jane's boss likes this about Jane. Because he doesn't like users to yell at him.

Run, COBOL, Run.

This DP manager got a bonus. Because he doubled productivity. Cleared backlogs. Cut costs. Boosted morale. Produced terrific applications. Quickly. Put control and prestige back into the central DP function. And nobody yells at him anymore. All thanks to ANIMATOR.

See ANIMATOR now.

Let Micro Focus put your DP shop on the fast track.

ANIMATOR runs with Micro Focus LEVEL II COBOL for compatibility with ANSI '74 High Level COBOL implementations. A mainframe-micro communications link is recommended for downloading mainframe programs.

2 Trillion

Last night we backed up two trillion (yes, that's 12 zeroes) characters of data, and checked our work.

VMBACKUP

We bring files back alive, the way they should be—readable, usable—which some "cut-rate" backup systems *don't* do. We verify the data before moving it to tape. That's why 75% of the Fortune 100 companies trust their vital data to VMBACKUP.

How do we do this?

- Start with a solid design.
- Take the best systems people in the VM community.
- Have them build it right.
- Add competent, helpful support people.
- Stay close to our customers.

And we create a winning situation for our users.

VAX track to hardware freedom.

You know about the many portable programming benefits of UNIX™. You're also keenly aware of your company's extensive investment in VMS software. Now you can take advantage of both and be hardware independent, too. Because now there's EUNICE.

▲ **Clearly, the way to go.**

EUNICE provides a machine transparent medium that allows your programmers the freedom to operate in any one of three environments: VMS, UNIX, or integrated VMS/UNIX. They can switch modes at any time, depending on application. And through EUNICE, they can also take advantage of a wealth of available UNIX-based software.

EUNICE comes with the full Berkeley 4.1 BSD UNIX environment which includes the high level languages of C, FORTRAN 77, LISP, Pascal, and Franz LISP. You also get standard UNIX networking software. Plus, Source Code Control System — a powerful facility that provides a completely controlled program development and documentation environment.

▲ **We keep you on track.**

Wollongong is a full-service organization dedicated to the advancement of UNIX. As such, we're quickly becoming recognized as *The UNIX Authority*. We sell more UNIX-based software to the 32-bit minicomputer market than anyone else. And back it with the widest range of support services available.

Services like personalized client consultation; system-level design; fast, efficient installation; on-site training and full documentation. We also provide a wide variety of options to enhance the efficiency of your VMS/UNIX system. Options like RM/COBOL, a high-level implementation of the ANSI 74 COBOL standard for efficient execution of COBOL business applications. Or IP/TCP, the new Department of Defense protocol that allows two or more host computers to communicate within a predefined environment.

▲ **Over 300 VAX sites already free!**

They know the fastest track to independence lies with EUNICE. Because they've joined the growing list of satisfied Wollongong customers. To find out how you can enjoy hardware freedom, mail the coupon today, or call our toll-free number: 800-USA-UNIX. In California, call: 800-962-UNIX.

A unique company dedicated to the development and enhancement of UNIX* software and support regardless of host hardware! This was the concept pioneered by The Wollongong Group in 1980. The year it introduced the 32-bit UNIX-based operating system for the Perkin-Elmer 3200 Series.

The world's first UNIX utility company.

Since then, we have continued to develop and market a wide spectrum of UNIX software for 32-bit minicomputers. We have also gained an enviable clientele from the ranks of the 'Fortune 1000.' In fact, we have now extended the UNIX utility concept through distribution channels to worldwide markets.

Today, Wollongong software products not only operate under UNIX, but also under DEC's VMS and our proprietary EUNICE which provides a transparent link between UNIX and VMS on the same host computer.

System-level packages
These run under VMS or EUNICE for VAX users, or UNIX for PE 3200 users.

IP/TCP Internet Protocol Transmission Control Protocol is the newly adopted Department of Defense standard which provides a set of cooperative processes allowing two or more host computers to communicate.

R/M COBOL is a high-level implementation of the ANSI 74 COBOL standard, designed for efficient development and execution of COBOL business applications. Features include GSA certified COBOL, Level-2 relative and indexed file access methods, plus full arithmetic capability.

Full Screen Editor supports advanced programming and text processing requirements, concurrent file editing, and formatting.

Metaport products

EUNICE A comprehensive suite of software which provides VAX users with the unique ability to merge their native VMS environment with state of the art UNIX commands and utilities.

REX Runtime EXecutive provides all necessary interface software to allow application-level programs developed under UNIX to properly execute with VMS.

UNIX support services
Comprehensive seminars are provided for both novice and experienced UNIX users. These feature hands-on lab sessions as well as classroom presentations. Yearly support contracts which extend all the services and support provided during the initial product warranty period are also available.

Custom products and services
These include UNIX 'porting', UNIX modifications for special applications, custom hardware/software integration and system performance analysis.

Plug-in now to the world's first UNIX utility company for total service and support. From The Wollongong Group, 1135a San Antonio Rd., Palo Alto, CA 94303. Telephone 415-962-9224. Toll free 800-USA-UNIX (In California call 800-962-UNIX).

IDMS/R Automatic System Facility.

One database management system provides an Automatic System Facility for system development: IDMS/R.

Fourth generation languages, though excellent productivity tools, only address part of the system development task – namely, steps three and four as shown above. IDMS/R with Automatic System Facility, however, automates all of the steps necessary to develop systems. All you do is specify the data.

The Automatic System Facility dynamically builds the system.

It defines the database; creates screen formats; develops the applications; links the definition, screen and application together, then documents the system.

One DBMS using a powerful system development facility does it all. And does it all automatically. IDMS/R.

For more information or a demonstration on this unique facility, call 617-329-7700. To attend a seminar refer to the following page for a complete schedule.

WHAT TO WEAR TO WORK IF YOU BUY THE WRONG DBMS INSTEAD OF OUR MODEL 204.

Picking the best, most productive DBMS for an OS, DOS or CMS environment requires the use of all your faculties. Because many DBMSs never live up to their promises. And sooner or later those deficiencies are bound to catch up with you. Leaving you looking for something to hide behind.

Computer Corporation of America doesn't have to put on an act to convince you. Our MODEL 204 DBMS is the only commercial DBMS ever designed from scratch for online systems. Every other DBMS was converted from batch. And that means new applications come up faster with MODEL 204. In fact, 5 to 50 times faster. And your applications and databases are much easier to maintain.

What about performance? If you end up with a DBMS that can barely carry a few million records and a dozen or so users, you won't be able to mask the fact forever. Especially if someone finds out that MODEL 204 can handle up to 513 billion records and 999 concurrent updates.

Now the advantages of MODEL 204 are available for the DOS/VS(E) and native CMS environments. Without sacrificing either performance or productivity.

In the DOS world, MODEL 204 is the only DBMS with a direct teleprocessing interface. Which saves the resources and productivity costs of a terminal monitor.

Our native CMS implementation outperforms other DBMSs because it utilizes its own I/O routines without modification to either VM or CMS.

Finally, two other things that no other DBMS can say. MODEL 204 received the highest overall rating in a recent *Datapro* survey: 3.5.[1] And it's the fastest growing system for IBM mainframes from an independent vendor.[2]

Now faced with these facts wouldn't you look silly buying anything but MODEL 204 DBMS?

MIX VS.

No DBMS matches SEED for transportability. No DBMS offers you a wider range of hardware options now and for the future. Whether you opt for DEC, IBM, Prime, Perkin-Elmer or GOULD CSD.

And SEED lets you transport applications across machines–micro to mainframe or the reverse. SEED also provides the only compatible path from DEC 10/20 to IBM and VAX.

Because SEED is so transportable, it enables you to standardize development efforts to increase programmer productivity. In short, SEED helps you get the most out of both your hardware and your human resources. And we back SEED with our own resources–a team of experienced professionals that gives you personalized, on-going support and service.

SIMPLY PUT...

Decision Support Systems (DSS). Database Management Systems (DBMS). Human Resource Managment Systems (HRMS). Information Systems. User-Developed Systems. Information Centers. A lot of technical terms for what should be a simple concept: ***Putting the power of the computer in the hands of the decision maker as well as the computer programmer.***

Times and technology have changed to make this possible. Now, powerful 32-bit systems are available at a fraction of mainframe costs and the software solution is finally available.

3CI's ***InFoCen™*** *can be classified by a lot of technical terms. Simply put, it allows decision makers to begin* ***using*** *the computer instead of* ***listening*** *to computerese. Through software tools like a relational DBMS, color graphics, forms, reports, statistics, messages, and user defineable command prompts, applications are limited only by an individual's imagination.*

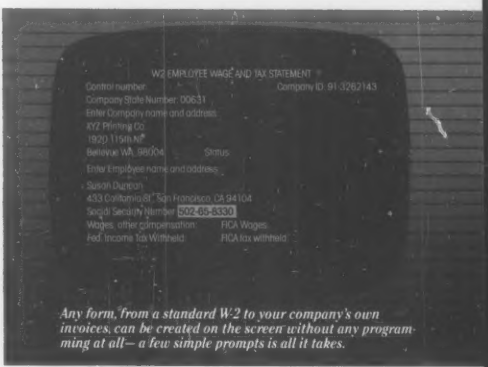
IF YOU'RE CONSIDERING CONSIDER

As a knowledgeable personal computer user, you know that there's a world of difference between first generation software products and second. (Think of VisiCalc™ and Lotus 1-2-3,™ for example.)

It's the difference between setting standards. And then raising them.

INTRODUCING R:BASE,™ FROM MICRORIM.™

R:base is the new generation of relational database software. With a combination of capacity, speed and transportability that today's more powerful PC applications need. (Check out the comparisons.)



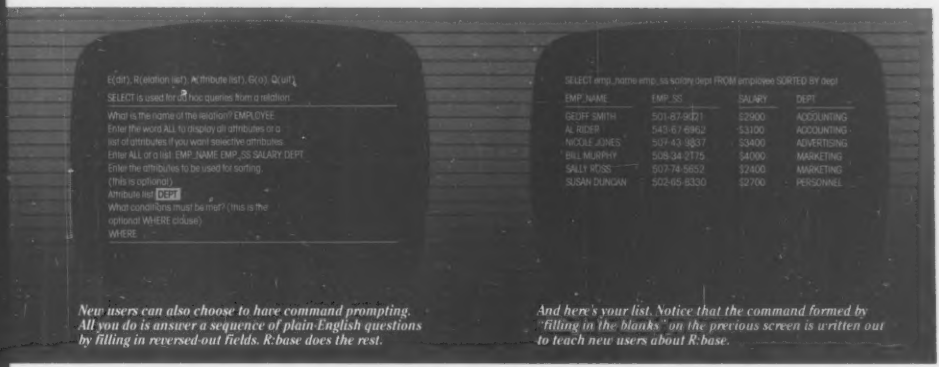
Not only that, R:base is much simpler to use and learn. So your applications are up in days, instead of weeks. And anyone—computer literate or not—can enter and view data, and generate reports. Just what you would expect from a second generation product.

MANAGING A DATABASE. CONVENIENTLY.

With R:base, it's simple. A series of prompts guides you every step of the way. Which means you don't have to be a programmer to create data entry or report forms just like the ones you're used to using.

As you become more proficient, you'll create shortcuts by customizing menus of stored commands. And print reports as simple or complex as you like at the touch of a key. With R:base, prompted, ad-hoc queries and customized report formatting become the reality that first generation products could only promise!

R:base is also very forgiving. It's very hard to make a mistake. That's because commands are simple English expressions—like SELECT, PROJECT, WITH, WHERE, FROM, etc. Dates and dollar amounts are written normally: 11/16/83;



Any form, from a standard W-2 to your company's own invoices, can be created on the screen without any programming at all— a few simple prompts is all it takes.

	MAXIMUM RECORDS/ DATABASE	FILES AVAILABLE CONCURRENTLY	MAXIMUM NUMBER FIELDS/ DATABASE	TIME TO SORT 1000 RECORDS* (MIN:SEC)	UPDATE MULTIPLE FILES CONCURRENTLY	PRICE (LIST)
R:BASE 4000	100 billion	40	400	0:59	Yes	$495
dBASE II	65,535	2	32	5:47	No	$695
CONDOR	32,768	2	127	2:03	No	$650

*Sort 1000 records on 1 key value. (IBM PC with 256K and DS DD diskettes)

dBASE II is a trademark of Ashton-Tate. VisiCalc is a trademark of VisiCorp. 1-2-3 is a trademark of Lotus. MultiPlan and MS-DOS are trademarks of MicroSoft. CTOS is a trademark of Convergent Technologies. Unix is a trademark of Bell Labs.

PURCHASING dBASE II,™ THIS FIRST.

New users can also choose to have command prompting. All you do is answer a sequence of plain-English questions by filling in reversed-out fields. R:base does the rest.

And here's your list. Notice that the command formed by "filling in the blanks" on the previous screen is written out to teach new users about R:base.

$500.00. And, because data entry verification rules are defined up front, you just can't put any "garbage in"—even if you try!

What's more, R:base allows you to sort and select data on up to ten different criteria, perform totals, and then display the results—all with a single, powerful command (see screens).

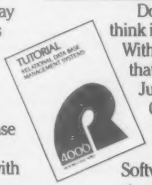
QUESTIONS? ASK FOR HELP.

The R:base HELP feature provides detailed information that describes every command and process required for complete mastery of the database. (As does our plain-English documentation.) For example, if you're not sure what SELECT does, simply key in HELP SELECT and R:base will tell you what the command does, how it works, even the proper syntax. This way you don't have to keep referring back to the user manual—it's all right there in front of you.

R:base + MULTIPLAN™ = POWER.²

Unlike first generation microdatabases offering the "amazing" capacity of one file and some 60,000 records, R:base literally blows the lid off database size. You may never create an application using forty files with 100 billion records. But with R:base, you can.

Now imagine being able to tap all that power in conjunction with one of the most popular spreadsheet programs on the market today: MultiPlan. R:base is fully compatible with MultiPlan, so you can zip back and forth between programs without cumbersome file manipulation.



THE R:base PRODUCT FAMILY.

R:base™ 4000 is a single-user relational database (MS-DOS™ version is list $495). R:base™ 6000 is a multi-user version, available early 1984. In addition to MS-DOS, both packages will also be available in CTOS,™ with UNIX™ to follow.

The optional extended ReportWriter™ provides enhanced reporting and calculating capabilities (MS-DOS version is list $150). Program Interface™ is a set of subroutines which allows direct database access from PASCAL or FORTRAN programs (MS-DOS Version is list $395).

And what happens if you've already got dBASE II? Not to worry. It's easy to transfer your files to R:base.

FULL DEMO PACKET, $9.95.

Does all this sound too good to be true? If you think it does, let us prove to you that R:base is for real. With a comprehensive tutorial and demo diskette that will give you convincing hands-on experience. Just call our order desk at (800) 227-6703 (in California, 800-632-7979) and have your VISA or MasterCard number handy.

MANTIS

A RECENT INDEPENDENT STUDY* RATED MANTIS™ HIGHER THAN DMS AND UFO...

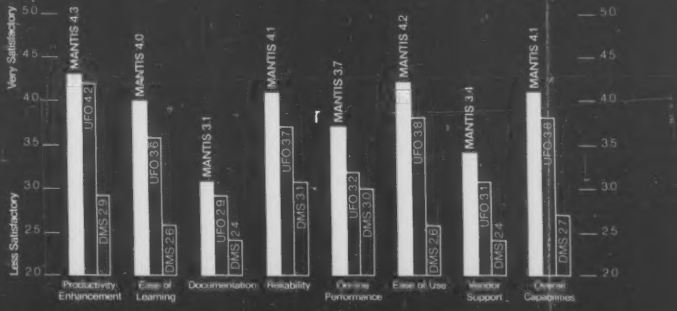
BUT THAT'S NOT HIGH ENOUGH FOR US.

When a recent study compared MANTIS, our new application development system, to DMS and UFO, MANTIS rated number "1" in all eight user categories. Needless to say we were quite pleased.

But scoring high on a study is one thing. Maintaining the state-of-the-art technology of a product is quite another. And that's why we've delivered two major releases of MANTIS since the study was conducted.

Today, more than 1,200 corporations and organizations worldwide are using MANTIS. These users are discovering productivity gains that they never before thought possible. Many of them are using MANTIS for 100% of their on-line application implementation.

With complete compatibility MANTIS now supports TOTAL®, TIS®, VSAM, DL/1 files and a full range of operating systems, including CMS. And decision support tools such as graphics and electronic spreadsheet are also integrated with MANTIS giving you the ability to directly access data from all data files.



Do other companies work as hard to improve the performance of their products? We're not sure. But there is one thing we are sure of. At Cincom, we set our standards very high.

macs. Since 1969, No. 1 in software testing

WE MAKE SOFTWARE HEROES™

We set the standard in software testing...and deliver the tools that are enabling thousands of user organizations throughout the world improve software quality and increase productivity.

- **DATAMACS**/industry's most widely used automatic test data generator
- **Test Plan Training.** Give us a morning and we'll show you how to cut development costs 20%; free up to 80% more time of your maintenance staff
- **TRACMACS**/program path auditor that assures 100% testing
- **Testing Standards,** developed in concert with our users, and being proven daily by Big 8 accounting firms, IEEE, QAI, DPMA and hundreds of quality-conscious users

macs. In 1983, No. 1 in software estimating

In less than one year, **ESTIMACS** has established itself as the most widely used macro estimating tool in the data processing industry. Widely acclaimed as the only trusted macro estimator, it is helping organizations accurately, reliably estimate new development and system maintenance workloads — especially helpful in package installations, make-or-buy decisions, and long-range planning.

macs. For 1984, the best new idea in software project management

Introducing **PROJECTMACS,** the industry's first and only knowledge-based project management system for phased software development. The logical follow-on to ESTIMACS, PROJECTMACS is a unique systems development tool for knowledge-based micro-phase estimating, expert project planning and scheduling, and distributed project tracking and control. A dramatic step forward in the automation of the software development life cycle and project management tasks, PROJECTMACS goes far beyond any traditional project control/accounting system.

DOES VSAM HAVE YOU *"UP A TREE??"*

THEN YOU NEED VSAM UTILITIES FROM SOFTWORKS

VSAM—ASSIST
Installed on over 300 systems to back up and restore VSAM files and catalogs quickly, efficiently, and safely. Dumps files to a variety of storage devices in only 10% of the time required by REPRO. Automatically adjusts for different track size when migrating from 3350 to 3375/3380 DASD. ICF Support included. For all OS/VS systems.

QUICK—INDEX
Loads alternate indexes in one-fifth the time required by BLDINDEX. Eliminates the need to establish VSAM sort work space. For all OS/VS and DOS/VS(E) systems.

VSAM SPACE MANAGER
Provides total management of VSAM space through a "public VSAM facility", eliminating the need to identify specific volumes when allocating VSAM space. Also allows users to "place" clusters and catalogs by absolute track address minimizing arm movement on the volume. For all OS/VS systems.

VCAR
A VSAM—COBOL I-O Logic Error Display utility that frees application programmers from the time-consuming searching and guess work involved in dealing with I-O logic errors by allowing the quick determination of the causes of those errors. For all OS/VS systems.

COMPUTER ASSOCIATES

ADVANCED BUSINESS SOFTWARE

History will record as a profound irony
that the most powerful word processing package
ever created for the IBM® Personal Computer
can be worked with two fingers.

It was created by Leading Edge,® specifically to take advantage of the power of the IBM PC, plus the simplicity that all that power ought to be able to give you—but didn't.

Until now, you could go for the simplicity, and end up with a somewhat glorified typewriter. Or you could go for the power, and go nuts performing dozens of commands to do even the simplest things.

But with Leading Edge Word Processing™ you get both.

You don't have to start with an ounce of understanding about word processing.

You don't even have to be a terrific typist. (Matter of fact, the worse you type, the more the help.)

So come along.

Hunt and peck your way into the future.

LEADING EDGE®
